1 Claims 1-30 (Cancelled)

1 31. (New) A dynamically configurable wireless communication system,  
2 comprising:  
3 a server comprising a processor coupled to a memory that stores,  
4 functional instructions comprising distinct instructions and instruction sets  
5 for use in providing a plurality of functions; and  
6 a plurality of communication protocols, comprising wired and wireless  
7 communication protocols, and a plurality of control protocols that facilitate  
8 communication between the server and a mobile device, wherein the server is configured  
9 to convert the mobile device from one function to another function to provide the  
10 plurality of functions at the mobile device; and  
11 the mobile device, wherein the mobile device is configurable for voice and data  
12 communications, the mobile device further configurable to,  
13 communicate using different parameters, including different frequencies,  
14 the mobile device configured to access the functional instructions and to store the  
15 functional instructions;  
16 receive a selection of one or more of the functional instructions, wherein a  
17 selected first functional instruction enables a first function on the mobile device, and  
18 wherein a selected second functional instruction enables a second function on the mobile  
19 device; and  
20 processing the functional instructions at one or more of the mobile device  
21 and the server, wherein the mobile device functions to provide one or more of  
22 communication functions, electronic mail transmit and receive functions, video functions,  
23 and audio functions.
